

Compact, Low Cost, Telephone Equipment Test Unit

Telephone Line Simulators

When you need to Test, Demonstrate or Develop Telecommunications Equipment

The RingMaster Telephone Line Simulator devices are designed to allow ANY TWO TELEPHONE devices to communicate, at distances up to 2km, without the need to connect to a telecom line, which would otherwise cost 25c per call, and tie up 2 separate telephone lines. The RingMaster devices are compact, reliable and can be conveniently used on any test bench, or even in the field. Operation is bi-directional so that either telephone device can make or receive telephone calls. Connection quality is loud and clear just like a telephone line, allowing for reliable Modem connection at maximum modem speeds. Common applications for these devices include:

- **Testing of Telephone Equipment**
- **Development of Telephone Equipment**
- **Demonstration of Telephone Equipment**
- **Training in the operation of Telephone Equipment**
- **Production Line Quality Control Testing of Telephone Equipment**

THREE MODELS TO CHOOSE FROM

RINGMASTER STD is a simple Ring & Connect device which will allow any 2 telephone devices to communicate.

There is no dial tone or busy tone and you do not need to dial a number to initiate a call. To initiate a call, you need only lift one handset and this device will RING the other device. When the other device is answered, you will be connected loud and clear just like a telephone line. If you intend to use modem based devices, then you will need to disable the "detect dial tone" facility in order for modem equipment to dial (or you should use our RINGMASTER PRO version). RINGMASTER STD provides:

* Australian Ring Output, Call Connection, loud and clear just like a telephone line, Bi-Directional operation

RINGMASTER PRO is a sophisticated device which will allow any 2 telephone devices to communicate.

There is dial tone and busy tone as appropriate and just like a real telephone line, you must dial a number to initiate a call. When the other device answers, you will be connected loud and clear just like a telephone line. This version is ideal for modem based devices and all other situations where accurate emulation of a telephone line is required. All 7 alternative Australian distinctive Ring Patterns, including FaxStream Duet, Multiple Number and Diverted Number rings can also be generated. RINGMASTER PRO provides:

* Australian Ring Output, Call Connection, loud and clear just like a telephone line, Bi-Directional operation

* All 7 alternative Australian Ring Patterns, including FaxStream Duet, Multiple Number and Diverted Number rings

* Audible Call Progress Tones

* Australian Dial Tone

* Australian Busy Tone

RINGMASTER CLI is a sophisticated device which provides all of the facilities of the RINGMASTER PRO device

and in addition has the ability to generate and transmit CLI (Telstra Calling Number Display) data.

10 representative transmissions are stored which include telephone number, date & time. An alphanumeric (callers name) transmission is also included ready for future updates of the Telstra system. The CLI data can be transmitted with any call by simply entering an additional digit from 0 to 9. You can even enter and transmit your own telephone number. RINGMASTER CLI provides:

* Australian Ring Output, Call Connection, loud and clear just like a telephone line, Bi-Directional operation

* All 7 alternative Australian Ring Patterns, including FaxStream Duet, Multiple Number and Diverted Number rings

* Audible Call Progress Tones

* Australian Dial Tone

* Australian Busy Tone

* CLI Data (10 prestored transmission plus 1 user definable transmission)
