

PDA software for the *dataTaker* data logger

DeMobile™5 & *DeMobile*™8

PDA users with *DeMobile* software now have direct access to their *dataTaker* data loggers for a variety of functions. Using a BlueTooth™ interface or RS232 the PDA can be used to monitor real time operations, download data or even program the data logger.

The *DeMobile* software is available for both the *DT800* and the *DT500* range.

DT5/6xx range users require *DeMobile5*
DT800 users require *DeMobile8*.

The *dataTaker DeMobile* interface designed is specifically for the Microsoft® Pocket PC2003 and the resolution of the current generation of PDA devices. With touch screen control, check box selection changes, it has tabbed interface for a cleaner look with short cuts for common functions. The intuitive design provides functionally.

With *DeMobile* your PDA can:-

- Download data
- Check status of logger
- Monitor data
- Control the data logger
- Program the data logger
- Manage the data logger memory card
- View data directly in *DeView*™ & *DeLogger*™ Pro

Whether used on its own or with *Datataker's DeLogger 4 Pro* software it is a powerful tool! Large amounts of data can be downloaded to the PDA's internal memory or unlimited storage using Compact Flash or Smart Media plug-in cards.
