

APPLICATION SHEET

Detecting a scant supply condition of fluid material & measuring the temperature distribution

TP-L helps:

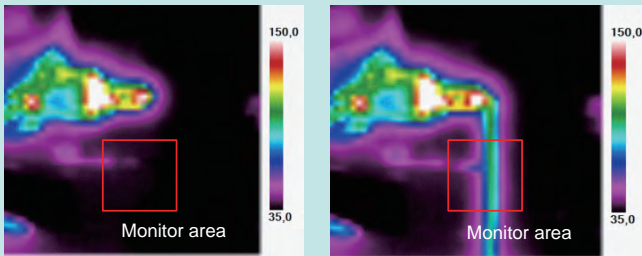

Do you bother oneself about solving the problems of measuring/detecting fluid material or meander shape material? CHINO has an answer for them. It is TP-L!! TP-L can measure and detect those objects easily and out of contact.

Features

TP-L camera analyzes 2000 points of temperature distribution, and detect as temperature alarm signal by setting a monitoring area. Also, TP-L has an online connection using capture mode to send a detect signal.

Detecting function

No material

Detect material

The monitoring data is recorded continuously in JPG(Image picture) and CSV (temp data). It is useful for analyzing data.

Analyzing Data
