- High temperature tolerance, suitable for heat sterilization up to +200 °C
- Excellent measurement accuracy with Vaisala HUMICAP® 180R sensor
- Maintenance-free
- Detachable probe assembly for easy installation
- Probe head with M10x1 threads
- 2-point NIST traceable calibration (certificate included)
- Applications: test chambers, incubators

The Vaisala HUMICAP® Digital Humidity Module HMM105 is an open frame module for integration into environmental chambers. The modules provide an I²C output for relative humidity (RH) or dew point (T_d). The module consists of a detachable probe assembly – a probe head with M10x1 threads and a flex cable – and the module circuit board. The probe assembly is 30 cm in length. The module incorporates the Vaisala HUMICAP® 180R sensor which ensures excellent measurement accuracy.

Reliable for OEM's

The HMM105 probe head works in freezing conditions (-40 °C) and also in temperatures up to +180 °C in continuous use. In short term use, the probe head can be exposed to temperatures up to +200 °C. The HMM105 is intended

for OEM chamber manufacturers for integration into test chambers and incubators.

Maintenance-free

Compared to psychrometers, the HMM105 is practically maintenance free. There is no wick that needs changing and there is no need for a water tank or water pump. Thus, environmental stress screening can be done reliably.

I²C interface for better usability

The HMM105 has an I²C interface for communicating with the incubator's controller. The HMM105 implements I²C slave functionality, with the incubator's controller acting as the master. The interface can be used to read measurement values and status information, set operation parameters, and make adjustments.
