

Stop wasting time

Get Clever monitoring
your vaccine fridges

CleverLogger is a beautifully simple new type of logger.
It's completely automatic so it saves you time, stress and money.

No more manual
retrieval from loggers

Reports emailed to
you automatically

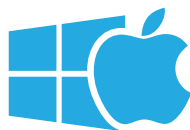

Alerts to your
smartphone

No ongoing fees
ever

Exceeds
"Strive for 5"

Works on PC, Mac,
Android and iPhone

Scalable to any size
organisation

Free Smartphone
app

Old data always
available online

How CleverLogger works

Automatic Retrieval

CleverLogger uses the power of the internet to automate the process of temperature logging.

The temperature **Logger** sits inside your fridge and transmits its temperature readings to a **Gateway**, which sits outside the fridge - up to 30m away. The Gateway saves the readings to the internet via wi-fi or Ethernet.

You don't have to do anything.

Automatic Reports

Set up a recurring report to be delivered straight to your inbox. No need to log in anywhere or download anything.

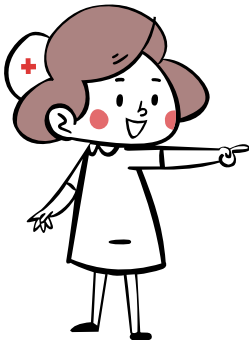

It just happens.

Immediate Notifications

If something goes wrong with the fridge and the temperature gets too high or too low, you'll find out immediately.

Notifications are sent to your email and your phone.

CLEVER LOGGER
